

## DESCRIPTION

The PT4303 is a low power superheterodyne OOK/ASK receiver for the 315/433.92 MHz frequency bands. It offers a high level of integration and requires only few external components. The PT4303 consists of a low-noise amplifier (LNA), a down-conversion mixer, an on-chip phase-locked loop (PLL) with integrated voltage-controlled oscillator (VCO) and loop filter, an OOK/ASK demodulator, a data filter, a data slicing comparator and an on-chip regulator. The PT4303 also implements a discrete one-step automatic gain control (AGC) to extend the dynamic range of the received RF signal.

The PT4303 is available in a 14-pin SOP package and is specified over the extended temperature range (-40 to +85°C).

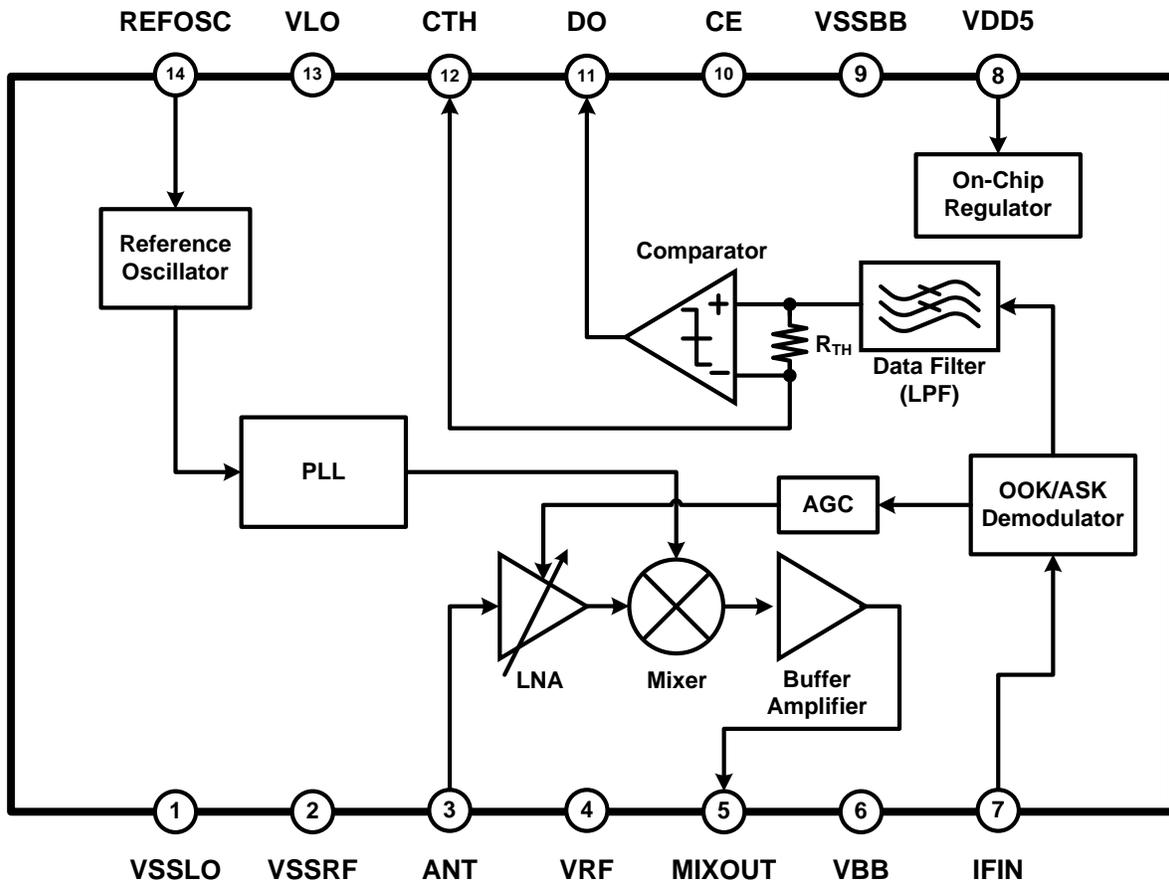

## FEATURES

- Ultra-low power consumption: 2.7 mA for full operation (315 MHz)
- Few external components
- Excellent sensitivity on the order of -110 dBm (peak ASK signal level at 315 MHz)
- 2.4 V to 5.5 V supply voltage range
- 250 MHz to 500 MHz frequency range
- Data rate up to 10 Kb/s

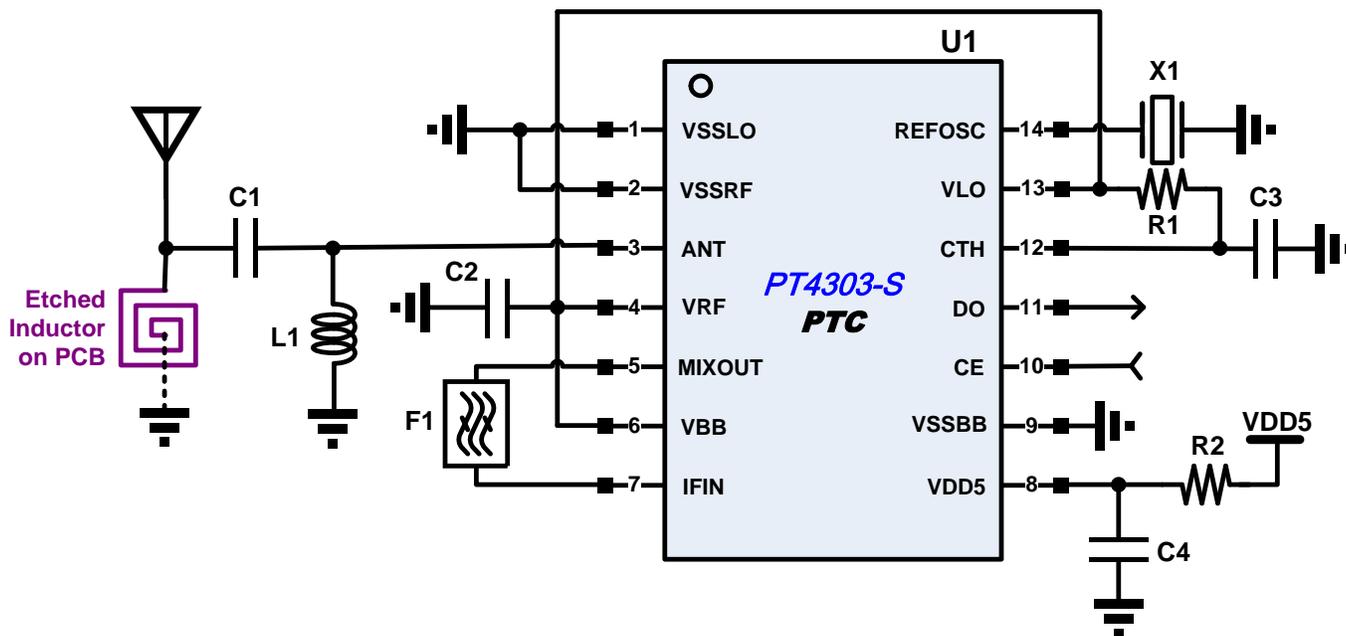

## APPLICATIONS

- Automotive remote keyless entry (RKE)
- Remote control
- Garage door and gate openers
- Suitable for applications that meet either the European ETSI-300-220 or the North American FCC (Part 15) regulatory standards

### Notes:

1. L1 and C1 are the components for input matching network. Their values may need to be adjusted depending upon different PCB layout and antenna requirements.
2. The value of C3 depends upon the data rate and coding pattern.
3. F1 is the 10.7 MHz ceramic filter. The recommended part number is Murata SFELA10M7HA00-B0.
4. The "optional" components are based on application requirements.
